

HRS v12 Engineering Hackathon

Setup Instructions for Hackathon Teams

February 2026

GitHub Repo Setup Steps

Please complete the following steps **before starting the hackathon**:

1. **Connect to Huron VPN**
 - Ensure the VPN is connected and active.
2. **Open Microsoft Applications Portal**
 - Go to: <https://myapplications.microsoft.com/>
3. **Access GitHub Enterprise**
 - Click on the **GitHub Enterprise Managed User** tile.
4. **Log in to GitHub**
 - Follow the on-screen directions to authenticate and log in.
5. **Go to Organizations**
 - Once on the GitHub home page, click on Profile icon and go to **Organizations**.
6. **Find Organization <ORGNAME>**
 - Click on <ORGNAME>.
7. **Create the Hackathon Repository**
 - Inside that Organization, create a new repository named:
`<team-name>_hackathon_2026`

Claude Code Installation & Login

Please install **Claude Code** on your local laptop using **one of the options below**:

Installation

- **CLI Installation:**
<https://code.claude.com/docs/en/quickstart>
- **VS Code Extension:**
<https://code.claude.com/docs/en/vs-code>

You may install either or both, based on your preference.

Login Instructions

- Ensure **Huron VPN is connected**
- When prompted to log in:
 - Select the **Enterprise** login option
 - Use your **Huron email address** for SSO authentication
- Complete the login flow as directed

Developing and Executing the Code

- Development can be done on laptop locally and checked into Hackathon GitHub repository
- Code execution and demo can be done on the laptop having Claude Code license.
